Name	Time	Location	Age

Mrs Banbury has had her morning delivery of milk stolen! After narrowing down the search, five suspects have been uncovered. Solve the puzzle to deduce the time each person left their house, their respective ages, and the locations they went to. Mrs Banbury's milk was stolen at about 10:15, so she suspects the culprit to be the person who arrived at their destination at 10:30. Who is it?

- 1) The 25 year old arrived at their location either half an hour before or half an hour after the person who attended the Post Office.
- 2) The person who is 58 years old arrived at their location either half an hour before or half an hour after Mr Jenkins. The 17 year old arrived at their destination after Mrs Lane arrived at hers. That extra bit of sleep was needed!
- 3) Mr Johnson always arrives at his location at 9:30 on the dot. This morning was no different!
The 63 year old arrived at their location an hour earlier than the villager who attended the bakery this morning.
- 4) Mrs Lane turned up to her location half an hour later than the person who went to the library. Miss Bennett arrived at her destination later than the 17 year old reached their location.
- 5) Miss Bennett had an important meeting at the village hall that she attended this morning whereas Mr Johnson sent a pressing letter when he visited the Post Office.
